AVO's Twin Turbo Kit for the LS1 V8

HOLDEN POWER PACKAGE

AVO is proud to announce the all-new twin-turbo Power Package for the Holden LS1 V8. This high-quality and extremely durable kit can give you up to 600 bolt-on horsepower, and is capable of 400 more with the proper engine modifications!

Over 34 years of turbocharging experience and thousands of hours of R&D have gone into the creation of AVO's all-new twin-turbo kit for the Holden LS1 V8. The LS1 Power Package is a complete kit that is easy to install thanks to our comprehensive installation guides. Also included in this kit is AVO's specially designed high-temperature cast manifold along with our huge bar and plate front mount intercooler, racing BOV, and all the necessary aluminium intercooler piping and other necessary fittings. Our single-cartridge, dual ball-bearing Edge Series Garrett® turbochargers generate far less frictional drag, and are 10 times more durable than traditional journal-bearing turbochargers.

Included in the AVO Power Package:
Twin GT ball-bearing R-Type Turbochargers
High-temp cast manifolds
High-temp cast turbo outlets
Bar and plate front mount intercooler
Aluminium IC piping and silicone joiners
Twin Power Air filters
Racing blow off valve
High-temp studs, turbo heat shielding, and all necessary hoses, clamps, and fittings
Braided turbo and oil lines
Upgraded fuel system (Fuel injectors, regulator, and pump)
ECU reflash*

*Stock ECU will need to be sent to Melbourne, Victoria shop for reflash

AVO cannot be held responsible for the damage this kit may do to your driveshaft, rear differential, or rear tyres.

Use at your own risk!

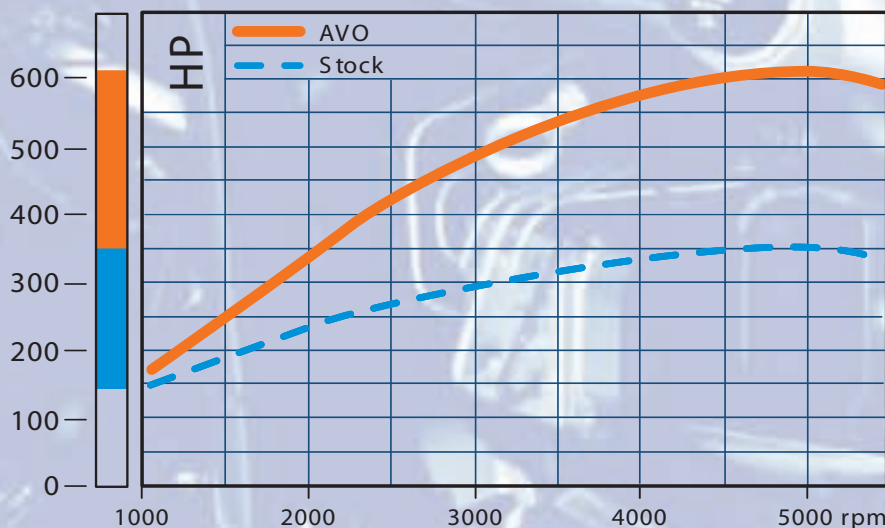

A pair of AVO GT35-R ball-bearing turbochargers not only offer nearly instant spool-up and high response, but have enough flow to get you up to 800hp on pump gas with the right engine modifications!

Our specially designed high-temperature cast alloy manifolds were designed and tested in the harshest conditions possible.

This kit fits all LHD and RHD models of the Holden/GTO LS1
